TECHNICAL PROJECTS

SmartInventory | Java, Sockets, JDBC, MySQL

Team project: Java client/server inventory application using database-backed create, read, update, and delete workflows. Collaborated with teammates on the inventory workflow and integration of application components.

MobileLab (In Progress) | Flutter/Dart, Node.js, Express, MySQL

Healthcare mobile capstone. Current work includes API integration planning and research into an accessible voice-assistant workflow for appointment and home-care coordination.

Right Drive Automotive | HTML, CSS, JavaScript, Node.js, Express, express-validator, Helmet

Developed a vehicle complaint form and Express submission flow with input validation. Tested the form locally and reviewed required-field validation feedback.

Taste Hub | Figma, UX/UI Design

Created a restaurant homepage concept with clear navigation, welcome content, featured dishes, and menu and reservation calls to action. Presented as a visual design concept, not a deployed ordering system.

HOBBIES & INTERESTS

- Building and troubleshooting personal computers, exploring new hardware and software
- Following new technology trends and testing new operating systems and tools
- Cooking and experimenting with new recipes
- Playing recreational soccer and cricket with friends and community groups

CERTIFICATIONS
